Power Systems

Here at Custom Coach Creations, we have been a leader when it comes to off grid power! We have been building Coaches with all electric powered appliances that run on battery power long before it was cool! We decided a long time ago that propane and noisy generators was not the way forward and it was time to make a change! Every Coach that we have built from day one was designed to be off grid capable, running on batteries and inverter system as well as being able to plug in at the Campsite. Custom Coach Creations has just launched its new forward thinking power systems as of May 1 2020 that every build package from the Basic up to the Platinum Plus will now be able to run the roof top Air-conditioning system off grid as well! If you're out for the day with your pets and would like to stop somewhere, you now have the freedom to leave them in the van with the roof top air-conditioner on keeping them cool and safe. **Everyone one of our Coaches will now be equipped with:** (1) 200 Amp Lithium Battery with a Battery management system built in for safety (2) 3000 Watt. Pure sine wave Inverter capable of running all power systems off grid (3) 125 Amp charging system to charge the battery when your plugged in to campsite (4) Battery Isolator

that allows your van to charge the battery when engine is running If you need more power, we can add Solar on the roof, up to 1330 Amps Battery power and a second alternator to the engine for super fast charging! Here at Custom Coach Creations we offer full custom power systems to suit your needs!
